

BRITISH AIRWAYS,  
HEATHROW

A project from Lester Controls

# BRITISH AIRWAYS, HEATHROW

**Opened in 1998, British Airways' award-winning four-storey Waterside building in Harmondsworth, London, is the company's international headquarters and one of several key facilities located in or close to Heathrow. The 9,000sqm building of mostly open plan offices accommodates around 4,000 staff, and has both scenic and enclosed lifts throughout the building.**

The lift contractor working for British Airways was modernising several KONE lifts situated at various locations in the building. During the job, the lift contractor was also awarded

the project to modernisation the lifts at British Airways' Global Learning Academy, Technical Block A, located within Heathrow Airport. This facility is considered to house the largest suite of flight simulators in the world.

For both buildings, Lester Controls has provided ALMEGA II controllers, along with Lester Controls shaft and ancillary equipment. We additionally supplied a range of ancillary shaft and signalisation equipment for both projects.
