A project from Lester Controls

# BRISTOL ROYAL INFIRMARY, BRISTOL

**University Hospitals Bristol NHS Foundation Trust (UH Bristol) provide general hospital service for patients living in central and south Bristol and North Somerset. UH Bristol also provides specialist services to a wider population throughout the South West. To support the community, the Foundation Trust also runs a group of hospitals, including Bristol Royal Infirmary, Bristol Royal Hospital for Children, Bristol Eye Hospital, South Bristol Community Hospital, along with various specialist hospitals in Bristol.**

The Foundation's chosen lift contractor Jackson Lift Services Ltd had been commissioned to undertake a gradual refurbishment of some of the 100 plus lifts that the Foundation Trust owns. The refurbishment included some aesthetics improvements, new lift controllers and drive replacements, to provide a more energy efficient service.

Over time, the Foundation had specified Lester Controls lift controllers for some of their modernisation projects and as a result, the decision was made to make Lester Controls the controller manufacturer of choice for their lift modernisations.

The lift controllers chosen were Lester Controls ALMEGA II systems with regenerative drive technology. This solution will provide the Foundation Trust with an opportunity to draw power from the downward movement of the lifts, through the regenerative drives specified with the ALMEGA II.

Lester Controls have also provided car and landing signalisation including TFT displays and programming of the voice annunciation in the Bristol Royal Hospital for Children.
