

THYSSEN SYNERGY,
7-STOREY LIFT
MODERNISATION

A project from Lester Controls

THYSSEN SYNERGY, 7-STOREY LIFT MODERNISATION

Originally built during the 1950s, the building was originally a five-storey print works. Since its original construction, the building underwent several major refurbishments, one of which included the construction of an additional two floors in 2013. Most recently, the building has undergone an architect designed modernisation, positioning it as premium office space located close to the South Bank and Waterloo Bridge.

Working with an independent lift contractor, R & R Lift Co Ltd, Lester Controls was asked if we could manufacture a lift controller

that would easily fit into the existing MRL controller housing. To confirm this, Lester Controls assisted with a detailed dimensional survey, and this along with the existing and refurbished lift equipment specification allowed us to confirm that we could supply exactly what the R & R Lift's wanted.

The control solution chosen was an ALMEGA II non-serial, 7-stop MRL, to manage each of the buildings' lifts. We additionally supplied non-serial Lester Controls indicators, landing fixtures and fittings.
